-! MISCELLANGOUS: THE SEQUENCES OF 10 HYBRIDOWA PROTEINS THAT ALS BIND DEXTRAN DIFFER FROM THAT SHOWN AT 1-7 POSITIONS, MANY OF WHICH OCCUR IN THE D AND J SEGMENTS.

-!- MISCELLANGOUS: THIS PROTEIN BINDS DEXTRAN.
-!- SIMILARITY: CONTAINS 1 immunoglobulin-like domain.

Patent No. 6752045

GENUERAL INFORMATION:
APPLICANT: James M. Anderson
APPLICANT: Christina M. Van Itallie
TITLE OF INVENTION: Human Occludin, Its Uses and
TITLE OF INVENTION: Enhancement of Drug Absorption Using Occludin Inhibitors
NUMBER OF SEQUENCES: 6
CORRESPONDENCE ADDRESS:
ADDRESSEE: Yale University Medical School
ADDRESSEE: Section of Digestive Diseases
ADDRESSEE: Department of Internal Medicine
STREET: 333 Cedar Street, LCI 105
CITY: New Haven

; Sequence 281, Application US/09042353
; Patent No. 6255458
; GENERAL INFORMATION:
; APPLICANT: Lonberg, Nils
; TITLE OF INVENTION: Transgenic No. 6255458-Human Animals for
; TITLE OF INVENTION: Producing Heterologous Antibodies
; NUMBER OF SEQUENCES:
; CORRESPONDENCE ADDRESS:
; ADDRESSEE: Townsend and Townsend and Crew LLP
; STREE: Two Embarcadero Center, Eighth Floor
; CITY: San Francisco
APPLICANT: Kay, Robert M.

No. 6.4; es 8; Conservative 0; Mismatches 0; Indels
COMPUTER: IBM PC

OPERATING SYSTEM: MS DOS

SOFTWARE: Word Processing

CURRENT APPLICATION DATE:
APPLICATION NUMBER: US/08/983,607

FILING DATE: April 27, 1998

CLASSIPICATION: 435

PRICK APPLICATION NUMBER: PCT/IB96/01032

PILING DATE: June 28, 1996

CLASSIPICATION NUMBER: PCT/IB96/01032

PILING DATE: WARMATION:
NAME: MARY M. KAILBAR:
APPLICATION NUMBER: 32423

REFERENCE/DOCKET NUMBER: 0CR-679

TELEPHONE: 203-773-9544

TELEPHONE: 203-773-1183

INFORMATION FOR SEQ ID NO: 48:
SEQUENCE CHARCTERISTICS:
LENGTH: 126 residues
TYPE: Amino acid
STRANDEDNESS: single
TOPOLOGY: linear
MOLECULE TYPE:
DESCRIPTION: POLYPEPLIER

ORGANISM: Homo sapiens (melanoma patient
ORGANISM: Homo sapiens (melanoma patient
ORGANISM: Homo sapiens (melanoma patient
ORGANISM: immunized with autologous tumor cells)
INDIVIDUAL ISOLATE: OFTER

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Description

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Infect. Immun. 70:1254-1259(2002).

-! CATLYTIC ACTIVITY: D-GLUGOSE 6-PHOSPHATE = D-FRUCTOSE 6-PHOSPHATE.

-!- PATHWAY: INVOLVED IN GLYCOLYSIS AND IN GLUCONEOGENESIS.

-!- SUBLILARITY: BELONGS TO THE GPI PAMILY.

-!- SIMILARITY: BELONGS TO THE GPI PAMILY.

--- SIMILARITY: BELONGS TO THE GPI PAMILY.

--- SIMILARITY: PROCATION: CYTOPLASMIC (BY SIMILARITY).

--- SIMILARITY: PELONGS TO THE GPI PAMILY.

--- SIMILARITY: PROCATION: CYTOPLASMIC (BY SIMILARITY).

--- SIMILARITY: PROCASO-6-phosphate isomerase activity; IEA.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

X L L L	Synthetic polypeptide(s) for inducing anti-idiotype antibodies - useful for treating auto immune-, endocrine- and rheumatic-diseases and myasthenia gravis.
X 82	Claim 10; Page 42; 44pp; English.
%888888888%%	Three rabbits were incculated with two s.c. injections of PGL1 (synthetic peptide) conjugated to KLH as an immunogen, and their sera were analysed for anti-peptide antibody activity by BLISA. All three immunised rabbits produced anti-PGL1 antibody. Antisera drawn from a rabbit on two different days reacted significantly with the corresp. intact IgM-RF Glo. See also AAR15365-74 and AAR15375. (Updated on 25-MAR-2003 to correct PA field.)

mechanisms are needed to cause or lead to the killing. The killing is dependent on the action of non-capsase proteases and/or cannot be inhibited by zVAD-fmk or zDEVD-fmk. The present sequence is a complementarity determining region (CDR) based on the human antigen binding polypeptides of the invention MS-GPC-1, 6, 8 and 10. The CDRs are either the native sequence or have been optimised/mutated to alter their antigen binding capabilities

Composition for suppressing immune response, treating diseases of immune system, has polypeptide comprising antibody-based antigen-binding domain of human composition, which binds antigen expressed on a cell surface.

Example; Page 60; 139pp; English.

The present invention describes a composition (I), comprising a polypeptide comprising an antibody-based antigen-binding domain of human composition with binding specificity for an antigen expressed on the surface of a cell, where treating cells expressing the antigen with the polypeptides leads to suppression of an immune response, and the IC50 for the suppression of immune response is 1 microM or less. (I) has

```
antirheumatic, antiarthritic, neuroprotective, antinflammatory,
antidabetic, antipsoriatic, immunosuppressive, dermatological,
can tidhyroid, nephrotropic, thyromimetic and hepatocropic activities, and
can be used as suppressor of immune response. (I) is useful for
can be used as suppressor of immune response. (I) is useful for
suppressing IL-2 secretion by a cell, the interaction of a cell of the
immune system with another cell, immunosuppressing a patient and for
ckilling a cell expressing an antigen, human leukocyte antigen (HiA)-DR on
the surface of the cell, where neither cytotoxic entities nor
ckilling a cell expressing an antigen, human leukocyte antigen (HiA)-DR on
the surface of the cell, where neither cytotoxic entities nor
cmannological mechanisms are needed to cause or lead to the killing. (I)
(optionally linked to cytotoxic or immunogenic agent) is useful for
cytotoxillis, juvenile arthritis, multiple solerosis, Grave's disease,
crathritis, juvenile arthritis, multiple solerosis, Grave's disease,
insulin-dependent diabetes, narcolopsy, psoriasis, systemic lupus
crathritis, lawingoto's disease, myashbania gravis, pemphigus vulgaris,
colomerulonephritis, thyroiditis, pancreatitis, insulitis, primary biliary
cirrhosis, irritable bowel disease and Sjogren's syndrome in humans.

Composition for suppressing immune response, treating diseases of immune system, has polypeptide comprising antibody-based antigen-binding domain of human composition, which binds antigen expressed on a cell surface.

Example, Page 60; 139pp; English.

The present invention describes a composition (I), comprising a composition with binding specificity for an antigen expressed on the camposition with binding specificity for an antigen expressed on the surface of a cell, where treating cells expressing the antigen with the cautient expressed on the suppression of immune response, and the ICSO for the suppression of immune response, and the ICSO for antidiabetic, antipsoriatic, immunosuppressive, dermatological, antidiabetic, antipsoriatic, immunosuppressive, dermatological, antidiabetic, antipsoriatic, immunosuppressive, dermatological, can be used as a suppressor of immune response. (I) is useful for can be used as a suppressor of immune response. (I) is useful for suppressing activation or proliferation of a cell of the immune system, compared to call, where cell, immunosuppressing a patient and for killing a cell expressing an antigen human leukocyte antigen (HLA)-DR on the surface of the cell, where neither cytotoxic entities not immunological mechanisms are needed to cause or lead to the killing. (I) (optionally linked to cytotoxic or immunogenic agent) is useful for preparing a pharmaceutical preparation for the treatment of rheumatoid arthritis, juvenile arthritis, multiple solerosis, Grave's disease, insulin-dependent diabetes, narcolepsy, psoriasis, systemic lupus corporation, grave disease, insulint corporation, grave and signame, corporation, grave and signame, corporation pharmaceutics, hyproidities, pancreatities, insulities, primary biliary corporation of the present invention corporation humans.

WO200187338-A1

The present invention describes a composition (I), comprising a polypeptide comprising an antibody-based antigen-binding domain of human composition with binding specificity for an antigen expressed on the curface of a cell, where treating cells expressing the antigen with the curface of a cell, where treating cells expressing the antigen with the polypetides leads to suppression of immune response, and the IC50 for the suppression of immune response, and the IC50 for antidiabetic, antipeoriatic, neuroprotective, antidiahetic, antipeoriatic, immunosuppressive, dermatological, antidiabetic, antipeoriatic, immunosuppressive, dermatological, can be used as a suppressor of immune response. (I) is useful for cur be used as a suppressor of immune response. (I) is useful for suppressing activation or proliferation of a cell of the immune system, comparessing in the cell, where cell, immunosuppressing a patient and for killing a cell expressing an antigen, human leukocyte antigen (HiA)-DR on the surface of the cell, where neither cytocoxic entities nor immunological mechanisms are needed to cause or lead to the killing. (I) (optionally linked to cytotoxic or immunogenic agent) is useful for preparing a pharmaceutical preparation for the treatment of rheumatoid arthritis, juvanile arthritis, multiple sclerosis, Grave's disease, insuliary comparation to the treatment of rheumatoid carbinesses, ankylosing spondylitis, transplant rejection, graft versus comparation the dependent diabetes manacolessy, psoxiasis, systemic lumpus comparation; insuliary insuliaris, thyroiditis, pancreatitis, insuliaris, phanacoles, continosis, insuliaris, thymodialiases and 3902469 to Aba92469 position for suppressing immune response, treating diseases of immune system, has polypeptide comprising antibody-based antigen-binding domain of human composition, which binds antigen expressed on a cell surface. ö Thomassen-Wolf Example; Page 60; 139pp; English. 14-MAY-2001; 2001WO-US015626. 12-MAY-2000; 2000EP-00110063 06-OCT-2000; 2000US-0238762P (GPCB-) GPC BIOTECH AG. Composition for suppressing immune response, treating diseases of immune system, has polypeptide comprising antibody-based antigen-binding domain of human composition, which binds antigen expressed on a cell surface.

Example; Page 60; 139pp; English.

The present invention describes a composition (I), comprising a composition with binding specificity for an antigen expressed on the cauface of a cell, where treating cells expressing the antigen with the surface of a cell, where treating cells expressing the antigen with the cautace of a cell, where treating cells expressing the antigen with the polypeptides leads to suppression of an immune response, and the ICSO for the suppression of immune presence, and the ICSO for antidabetic, antiarthritic, immunosuppressive, dermatological, antidathyroid, nephrotropic, thyromimetic and hepatocropic activities, and can be used as a suppressor of immune ersponse. (I) is useful for suppressing IL-2 secretion by a cell, the interaction of a cell of the immune system with another cell, immunosuppressing patient and for chilling a cell expressing an antigen, human leukocyte antigen (HLA)-DR on the surface of the cell, where neither cytotoxic entities nor continually linked to cytotoxic or immunogenic agent) is useful for or preparing a pharmaceutical preparation for the treatment of rheumatoid archingular jubetes, narcolepsy, psoriaais, systemic lupus carbritis, juvenile arthritis, multiple sclerosis, Grave's disease, insulin-dependent diabetes, narcolepsy, psoriaais, systemic lupus carbritis, irritable bowel disease, mysathenia gravis, pemphigus vulgaris, continual irritable bowel disease and Sjogren's syndrome in humans.

The properties of the call disease and Sjogren's syndrome in humans.

Novel isolated cancer-associated epitope comprising two separate polypeptides, a cytokeratin 8 polypeptide and a cytokeratin 18 polypeptide, useful as component of vaccine for preventing or treating adenocarcinoma.

Claim 15; Page 36; 155pp; English.

The invention provides a cancer-associated epitope comprising two separate polypeptides, a cytokeratin 8 polypeptide and a cytokeratin 18 polypeptide. Vaccine composition of the invention is useful for treating or preventing colon adenocarcinoma, ovarian adenocarcinoma, renal adenocarcinoma, mammary adenocarcinoma, lumg adenocarcinoma, pancreatic adenocarcinoma or non-seminomal testis carcinoma. The invention is also mammal. The present sequence is human COV-1 cancer-associated epitope antibody VL (light chain variable region) CDR (complementarity

20-FEB-2002; 2002EP-00003844. 20-FEB-2003; 2003WO-EP001759 28-AUG-2003. (MORP-) ઠે 셤 The invention relates to human monoclonal antibody that binds to human CC CD30. The antibody is useful for treating or preventing tumour or autoimmune disease e.g. rheumacoid arthritis, systemic lupus carteimmune disease e.g. rheumacoid arthritis, systemic lupus cerythematosus, systemic sclerosis, atopic dermatitis, Grave's disease, CC chronic renal failure, acute infectious monouncleosis, herges or HIV (human immunodeficiency virus) virus-associated diseases. The antibody is also useful for treating Hodgkin's disease, anaplastic large cell lymphoma (ALCL), adult T cell lymphoma (ATL), angloimmunoblastic coll lymphadenopathy (ALLD)-like T cell lymphoma, HIV associated body cavity lymphomas, embryonal carcinomas, undifferentiated carcinomas of the chino-pharynx (e.g. Schmincke's tumour), Castleman's disease, Raposi's sarcoma and other T-cell or B-cell lymphomas. The present sequence is Sarcoma and other T-cell or B-cell lymphomas. The present sequence is human CD30 antibody VI (light chain variable domain) CDR (complementarity determining region) peptide ö antibody molecule; antibody; beta-A4 peptide; Abeta4; neuroprotective; nootropic; antiparkinsonian; gene therapy; amyloidogenesis; amyloid-plaque formation; beta-amyloid plaque; immunisation; dementia; Alzheimer; a disease; motor neuropathy; Down's syndrome; Creutzfeldt Jacob disease; hereditary cerebral haemorrhage; amyloidosis; Parkinson's disease; HIV-related dementia; amyotrophic lateral sclerosis; neuronal disorder; aging. Gaps New human monoclonal antibody that binds to human CD30, useful for treating or preventing tumor or autoimmune disease, e.g., rheumatoid ·. Query Match

```
The present invention describes an antibody molecule (I) capable of pecifically recognising two regions of the beta-A4 peptide/Abeta4. The first region comprises the amino acid sequence Ala-Gul-Phe-Arg-His-Asp-Good Comprises the amino acid sequence Ala-Gul-Phe-Arg-His-Arg-His-Abla-Gul-Lya-Lya-Dhagagge or its fragment, and the second region comprises the amino acid sequence Val-His-His-Gul-Lya-Lya-Phe-Phe-Ala-Gul-App-Val-Composition (I) Appagger or its fragment. Also described: (I) a nucleic acid molecule calcomprising the vector comprising the nucleic acid of (I); (3) a vector comprising the nucleic acid of (I); (3) a nucleic acid of (I); (4) preparing (I), comprising (I) culturing the host cell of (3) under conditions that allow synthesis of culturing the host cell of (3) under conditions that allow synthesis of (I); (8) testing the resulting Fab optimisation library by panning (I); (8) testing the resulting Fab optimisation library by panning (I); (8) testing the resulting Fab optimisation of (I); and formulating the composition, comprising optimisation of (I); and formulating the composition, comprising optimisation of (I); and formulating the composition prepared by method (8). (1) has a composition comprising optimisation of (I); and formulating the composition prepared by method (8). (1) has a composition for composition preparing a pharmaceutical composition for composition preparing a pharmaceutical composition for composition preparing a disposit composition for the disease mentioned above. The antibody is used for the disease mentioned above. The antibody is used for the disease is capinity because is the disease mentioned above. The antibody is used for the disease is creatified Jacob disease, hereditary cerebral hammorrhage with amyloid-plaques or for passive immulsation of peacetion. In paramorphic lacera myloid plaques or leaves and paramorphic laceral sclerosts or neuropal described amyloid-place or neuropath, bown's synders anyloid-place or neuropath and paramorphic laceral sclerosts or neuropal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                              New antibody molecule capable of specifically recognizing two regions of the beta-A4 peptide, useful for diagnosing, preventing or treating diseases associated with amyloidogenesis or amyloid-plaque formation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

New antibody molecule capable of specifically recognizing two regions of the beta-A4 peptide, useful for diagnosing, preventing or treating diseases associated with amyloidogenesis or amyloid-plaque formation (e.g. dementia).

Example 5; Page 64; 312pp; English.

The present invention describes an antibody molecule (I) capable of specifically recognising two regions of the beta-A4 peptide/Abeta. The first region comprises the amino acid sequence Ala-Gill-Re-Arg-His-Asp. (I first region comprises the amino acid sequence Ala-Gill-Rap-Arg-His-Asp. (C dity ADA89886 or its fragment, and the second region comprises the amino acid sequence Val-His-His-Gill-Lys-Leu-Val-Phe-Phe-Ala-Gill-App-Val-C dity ADA89887 or its fragment. Also described; (I) a nucleic acid molecule conding (I); (2) a vector comprising the mucleic acid of (I); (3) a host cell comprising the host cell of (2); (4) preparing (I); comprising (I) or an antibody molecule produced by method (4); (6) a kit comprising (I) or an antibody molecule produced by method (4); (6) a kit comprising (I) or nucleic acid of (I), vector of (2) or host cell of (3); (7) optimising (I), vector of (2) or host cell of (3); (7) optimising (I) or nucleic acid of (I), vector of (2) or host cell of (3); (7) optimising (I) or nucleic acid of (I), vector of (2) or host cell of (3); (3) a kit comprising (I) optimised clones; (II) preparing a pharmaceutical composition of (II), and formulating the coptimised antibody/antibody/antibody molecule with a carrier; and (I2) a pharmaceutical composition prepared by method (8). (I) has neuroprotective, notoropic and antibody molecule with a carrier; and can be used in preparing a disagnostic composition for the prevention and/or amyloid-plaque formation. The antibody molecule (C of the disasse mentioned above. The antibody is used for the detection daminish and antibody is used for the detection of the disasse mentioned above. The antibody is used for the dementia, Alzheimer's disease, hereditary cerebral hamorrhage with against better amyloid plaques or for passive immunisation. C cof the disasse mentioned above. The antibody is used for the dementia, Alzheimer's disease, hereditary cerebral hamorrhage with against better amyloid plaques or heuropathy. Down's syndrom, anyloidosis butch trye, parkins

The present invention describes an antibody molecule (I) capable of specifically recognising two regions of the beta-A4 peptide/Abeta4. The first region comprises the amino acid sequence Ala-Glu-Phe-Arg-His-Aspramino acid sequence Val-His-His-Gln-Lys-Leu-Val-Phe-Phe-Ala-Glu-Bap-Val-Cly-Aba89886 or its fragment, and the second region comprises the amino acid sequence Val-His-His-Gln-Lys-Leu-Val-Phe-Phe-Ala-Glu-Bap-Val-Cly Aba89887 or its fragment. Also described: (1) a nucleic acid molecule concoding (I); (2) a vector comprising the nucleic acid of (1); (3) a host coll of (3) under conditions that allow synthesis of culturing the host cell of (3) under conditions that allow synthesis of (1) and recovering (1) from the culture; (5) a composition comprising (1) or an antibody molecule produced by method (4); (6) a kit comprising (1) concomprising (1); (8) testing the resulting Fab optimisation library by panning against Abeta4, (9) identifying optimised clones; (10) expressing composition, comprising optimisation of (1), and formulating the composition, comprising optimisation of (1), and formulating the composition, composition of (1), and comprising the composition of (1), and commissing the composition, composition of (1), and commissing the composition of (1), and formulating the composition of composition of (1), and composition of (1) a composition of (1) and composition of (1) and commission of (1) and

antibody molecule, antibody; beta-A4 peptide; Abeta4; neuroprotective; nootropic; antiparkinsonian; gene therapy; amyloidogenesis; amyloid-plaque formation; beta-amyloid plaque; immunisation; dementia; Alzheimer: disease; motor neuropathy; Down's syndrome; Creutzfeldt Jacob disease; hereditary cerebral haemorrhage; amyloidosis; Parkinson's disease; HIV-related dementia; amyotrophic lateral sclerosis;

The present invention describes an antibody molecule (1) capable of specifically recognising two regions of the beta-A# optide/Abeta4. The first region comprises the amino acid sequence Ala-Glu-Phe-Arg-His-Asp-Cflrst region comprises the amino acid sequence Ala-Glu-Phe-Arg-His-Asp-CC Ser-Gly-Tyr ADA8986 or its fragment, and the second region comprises the amino acid sequence Val-His-His-Gla-Liu-App-Val-CG Gly ADA89887 or its fragment. Also described: (1) a nucleic acid molecule conding (1); (2) a vector comprising the nucleic acid of (1); (3) a host cell comprising the vector of (2); (4) preparing (1), comprising (1) culturing the host cell of (3) index conditions that allow synthesis of culturing the host cell of (3) under conditions that allow synthesis of culturing the host cell of (3) under conditions that allow synthesis of culturing the host cell of (3) index conditions that allow synthesis of (1) and recovering (1) from the culture; (5) a composition comprising (1), vector of (2) or host cell of (3); (7) optimising (1), comprising optimised clones; (11) preparing a pharmaceutical composition comprising optimised clones; (11) preparing a pharmaceutical composition prepared by method (8). (1) has a paramaceutical composition prepared by method (8). (1), nucleic acid molecule optimised antibody/antibody molecule with a carrier; and (12) and pharmaceutical composition prepared by method (8). (1) has a composition of the prevention and/or amyloid-plaque formation. The antibody molecule may also be used in preparing a pharmaceutical composition for the prevention and/or amyloid plaques or for passive immunisation of the disease mentioned above. The antibody is used for the disease mentioned above. The antibody is used for the disease is dementia, Alzheimer's disease, hereditary cerebral hemorrhage with amyloidopal plaque formation. In paramaceutical composition of beta-amyloid plaques or for passive immunisation.
